

Address card component - ngFor, ngIf

Monday, 31 December 2018

11:22 AM

In this component we will display some person details such as name, phone number, address etc.

```
<div>
<h1>Foo bar!</h1>
<h3>Software Developer</h3>
<p>1234 Main city, state, street - 43243</p>
<div>
<p>Phone number</p>
<p>123-123-1234</p>
<p>123-123-9876</p>
</div>
</div>
```

Angular code snippet below:

```
export class AddressCardComponent implements OnInit {
  user: any;
  constructor() {
    this.user = {
      name : 'Foo Bar',
      title: 'Software Developer',
      address: '1234 Main city, state, street - 43243',
      phone: [
        '123-123-1234',
        '123-123-9876'
      ]
    };
  }
  ngOnInit() {
  }
}
```

```
<div>
<h1>{{user.name}}</h1>
<h3>{{user.title}}</h3>
<p>{{user.address}}</p>
<div>
<p>{{user.phone[0]}}</p>
```

```
<!--<p>{{user.phone[0]}}</p>
<p>{{user.phone[1]}}</p>
With looping-->
<p *ngFor="let phoneNumber of user.phone">{{phoneNumber}}</p>
</div>
</div>
```

Hiding phone data if array is empty using ngIf
