

ngContent and shell components

Monday, 7 January 2019

10:14 PM

Content project to accept content in component.

```
<ng-content></ng-content>
```

card.component.html

```
<div>  
<ng-content></ng-content>  
</div>>
```

Now, if card selector can accept content.

```
<app-card>  
  <h1>Header</h1>  
  <p>Paragraph</p>  
</app-card>
```

Shell components are used to create structure in application.

shell.component.html

```
<div>  
<ng-content select="[header]"></ng-content>>  
</div>  
<div>  
<ng-content select="[body]"></ng-content>  
</div>  
<div>  
<ng-content select="[footer]"></ng-content>  
</div>
```

app.component.html

```
<app-shell>  
<h1 header>Tutorial header</h1>  
<app-blog-list body></app-blog-list>  
<h2 footer></h2>  
</app-shell>
```
