

# Two way data binding

Monday, 31 December 2018

1:54 PM

Two data binding is angular one of the most important features. When user enters any data in UI (using text box), the data must get reflected to UI.

1. Import FormsModule in app.module.ts
2. Use ngModel in text component

```
<input type="text" [(ngModel)]="text">
  {{text}}
```

Now any text entered in text will simultaneously get displayed in UI
